

### SCPD Feed is now connected to Proscan

w2lie, Saturday July 11, 2015 - 16:54:37

At W2LIE.net, we are using Proscan software to source the NCFD-East, NCPD, SCFD-West, and Special audio feeds. One of the benefits of Proscan, is in addition to listening to the audio, users can see a virtual [scanner](#) on their desktop if they use either the licensed copy of Proscan, or the Free Client only Viewer.

The ability to stream audio, as well as locally archive, playback, and log the data, as well as adjust the radio from a remote location is making ProScan one of my favorite pieces of software to have on my computer.

Today, we moved around some of the radios, and reassigned a BCT15X to the task. The BCT-8 that has been running the SCPD feed wasn't compatible with the full features of ProScan, and has been reassigned to another task.

The SCPD feed now joins our NCFD-East, NCPD, SCFD-West, and Special feeds on the ProScan Directory. Users can now monitor our SCPD Feed by updating their ProScan Remote Directory listings, or by connecting to [remote.w2lie.net](http://remote.w2lie.net) on port 5004. Running ProScan will allow users to view the scanner on their desktop, log traffic, and record audio locally.

To download a copy of Proscan, visit [\[link\]](#). The full version of Proscan is available as a 30 day free trial. If you like the software, please support future releases by purchasing a copy of the software. A single license will work on two computers. For those looking for the free version, look to the bottom left corner of your screen for the download link. [\[html\]](#)
